Gate App – The World’s First Technology Designed to Instantly Stop Rapes and all forms of Sexual Assaults in Rideshare Vehicles

Calabasas, CA — August 2025 – Backed by expertise from the FBI and local and state police, the Gate app introduces a groundbreaking safety technology with one mission: to instantly stop the 7,000 to 8000 rapes and sexual assaults in rideshare vehicles worldwide.

“What we’ve created is powerful—so powerful, in fact, that we can’t reveal everything just yet,” said Graeme X Barrington, Founder and Senior Software Engineer. However, a little bit of our secret sauce is the use of AI predictive algorithm software.

“This concept has the potential to reshape the way over **6.7 billion women and teen girls** experience safety in rideshare platforms, such as Uber and Lyft annually. Once we launch and establish ourselves as the **first-to-market leader**, the full vision will be revealed for the world to use, experience, and trust.” Not only does gate prevent these horrific acts of violence against rideshare women, it provides a **profound measure of peace and mind once they** download the app.

Every second counts when a life is at risk. The Gate app is designed to prevent horrific crimes before they happen—protecting women, teens, and vulnerable individuals the moment they step into a rideshare vehicle.

Venture Capitalist Desired

Gate is currently seeking \$100,000 in pre-seed funding to accelerate launch and nationwide adoption. A Private Placement Memorandum (PPM) is also available for accredited and non-accredited investors, and we are accepting funding for share distribution. This investment will help bring this life-saving technology to the global market and make it available to riders everywhere.

“This app could save lives,” added Barrington. “It could protect your daughter, your wife, your girlfriend, or your friend the next time she gets into a rideshare vehicle.”

About Gate

Gate is a safety technology company dedicated to preventing sexual assaults, kidnappings, and other violent crimes in rideshare transportation. Founded by Graeme X Barrington, the company partners with law enforcement expertise to develop first-of-its-kind solutions to protect passengers worldwide.

This app is designed to save lives!
